e-BRIDGE Next

Overview

> Communicate information more effectively and more efficiently beyond simple "print".

> Enjoy the same advanced technology across a range of multifunction systems.

> Customisable user interface to suit your personal needs.

> Improve your efficiency thanks to the unique user experience.

CONNECT. INTEGRATE. SIMPLIFY.

Technology for every workplace delivering advanced functionality, ease of use and peace of mind.
Understanding that every industry has unique workflow needs, Toshiba has developed customisable MFPs to make your job easier. Intuitive and smartly integrated, our products simplify complex tasks and give you control while providing the reliability Toshiba is known for.

Toshiba's latest series delivers on our promise of Together Information - our commitment to collaborate with clients to provide tailored, cost-effective solutions that meet your print, document management and content needs while helping you to meet your green objectives.

The fast track to perfect results
It is our belief that the most successful organisations are those that communicate information in the most efficient way. Therefore, we constantly try and find ways to improve the

performance of our MFPs to optimise your workflows. We call this Together Information.

The result: a new generation of Toshiba multifunction systems with our brand-new e-BRIDGE Next controller technology inside. With this controller, creating, sharing, and managing your information workflows has never been easier.

Our latest systems take perfection to the next level. They have been re-designed — on the outside as well as on the inside — and are stylish devices with innovative technology which deliver outstanding performance.

Your workflows are unique and so our systems have been designed to adapt to them. No matter how complex the document workflow is, the Toshiba MFP works for you. A simple touch of a button is all it takes to start an automated process.

KEY HIGHLIGHTS

- **Ultimate user experience**

- **Industry-leading security standards**

- **Customisable user interface**

- **Advanced administration features**

- **Flexible system configuration and optimised service features for cost saving**

DOING IT YOUR WAY

A unique user experience
State-of-the-art technology has to be intuitive to use. Based on this fundamental idea Toshiba has designed e-BRIDGE Next to ensure you can interact effortlessly with your MFP system.

A customisable interface
The high-quality 9" colour multi-touch screen can be personalised according to a user's preferences and needs. It starts with the background image, which can easily be changed and continues with personalised views. You can change the order of the icons on the home screen, add or remove buttons and decide how many icons should be displayed per page, so that all functions present themselves to you in the most useful way.

Operating the MFPs is just as intuitive. You can swipe through the menu and also pinch and zoom into documents in the real-time preview. To increase your efficiency the most common features are presented to you in a "simple view". This means all elementary settings e.g. for copy or scan are available on one screen for faster execution. For more complex jobs, simply switch to the "advanced view". Here you will be able to adjust all settings or start more sophisticated document workflows. This exceptional user experience will maximise your efficiency and optimise business processes.
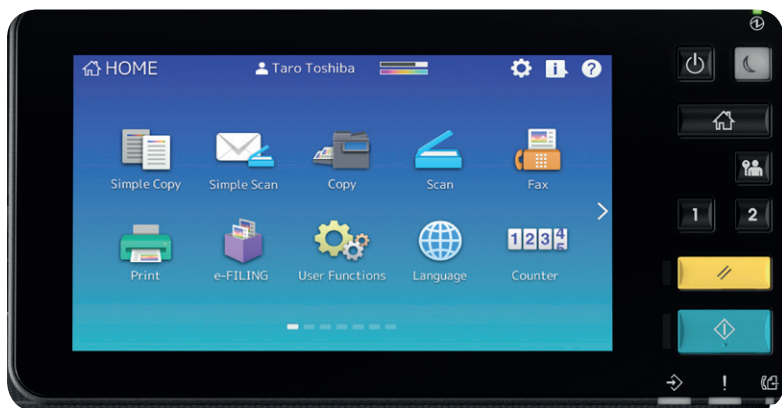

Doing more, more easily
Depending on the system you are using you have the possibility to process large batches of paper documents in one go either via the Reverse Automatic Document Feeder or the high-speed Dual Scan Document Feeder (DSDF)[1]. With the DSDF you can even do this with an impressive capacity of 300-sheets of double-sided documents and a maximum speed of 240 images per minute. Plus, you are not limited to standard paper sizes or weight, but can even process business cards or 35 gsm paper via the document feeder.
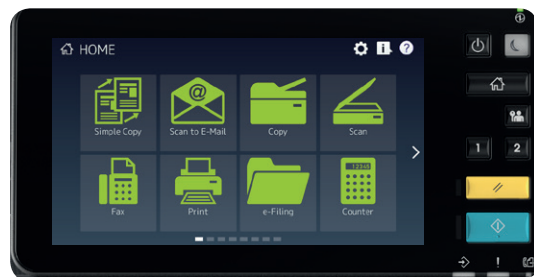

The optional embedded OCR adds to the already extensive list of functionalities the new Toshiba systems have to offer. By easily converting hard-copies into editable and/or searchable documents such as PDFs, Excel, Word or PowerPoint format, intelligent document management is taken a step further. The converted documents can automatically be created, shared and forwarded to a location of your choice. And all this happens via the MFP without the need of an additional server.

Customised to display up to 18 icons per page and with a different background

With a large touch screen document handling has never been easier. Size and order of icons as well as the background image can be customised. Enjoy the unique experience of working with a system that understands what you want.

Customised to display icons as buttons

[1] Availability of DSDF varies from model to model.

Cloud and mobile printing

In today's business world you decide what you want to print, how you want to share information and where it should be saved. The optional e-BRIDGE Plus connectors for Microsoft OneDrive, Google Drive, and Dropbox give you direct access to cloud services and let you send your documents directly to or print from the service of your choice via the MFP.

With mobile printing becoming more and more important; Toshiba's new systems give you full flexibility. All models can easily connect to mobile devices via AirPrint (iOS), Google Cloud Print or the Mopria Print Service (Android).

A single optional module for both wireless LAN and Bluetooth allows fast and easy transmission of data from mobile devices to the system by supporting peer-to-peer communication. Additionally, the WiFi-direct function is enhanced when used in combination with Toshiba's e-BRIDGE Print & Capture app. Once downloaded for free from your app store, you can not only print but also scan to your mobile device.

OneDrive
Google Drive
Mopria Print Service (Android)
Google Cloud Print
AirPrint (iOS)
Dropbox

The optional multi-station print feature allows you to decide, where you want to print within your network, without the need of a server. Simply walk up to any system and collect your job where it suits you best.

BEHIND THE SCENES

At the heart of the latest Toshiba models is the innovative e-BRIDGE Next controller — a technology which enhances the administration and integration into your IT infrastructure and simplifies the most complex tasks.

Connecting and integrating your Toshiba MFPs into an IT infrastructure is a hassle-free process, enabling administrators to work more efficiently. Highly flexible these Toshiba MFPs are compatible with all major operating systems and print environments such Windows, Mac, Linux, Unix, Citrix and SAP.

The open platform architecture of the e-BRIDGE Next controller lets you connect the MFP to server applications which support the creation of customised workflows. These workflows can help simplify complex tasks of scanning, archiving or document management thereby increasing the overall productivity of a business. The embedded web browser, which supports HTML 5, allows fast and effective communication with third party applications for seamless integration into workflows. The deployment of workflows, management of users and usage as well as monitoring and reporting can be done centrally, saving administrators valuable time.
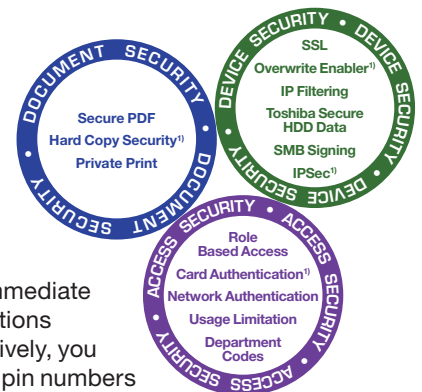

Consistent architecture
Thanks to the same e-BRIDGE Next architecture across most of the Toshiba systems, your print fleet management and diagnostics has become even easier.

Central user administration and device management via Toshiba's TopAccess web interface help optimise the usage of the systems and ensure full control. With the Roll Based Access Control feature cost control, quota allocation and user administration are made easy.

One for all
Not only IT administrators will enjoy the benefits of Toshiba's advanced technology. Besides benefiting from the intuitive operation users will also appreciate the advanced multi-threaded RIP technology of colour models and high-quality image processing. These ensure exceptional performance and document output. Thanks to the leading-edge processor technologies, provided by our partner company Intel Corporation, a powerful multi-core CPU increases the speed with which even large data volumes can be turned into perfect documents without having to compromise on quality.

PROTECTING YOUR DATA

Every day millions of confidential documents are produced and distributed. With MFPs and printers being able to store large amounts of data on their hard disk drive, they have become an integral part of business networks and thus are a critical point of vulnerability. Sensitive data and business-critical information can be subject to unauthorised access if proper security measures are not in place.

Toshiba offers various possibilities of securing your data and documents to help your business meet the increasing security challenges of today's world. These security measures can be grouped into the following three categories:

> Access Security
> Document Security
> Device Security

Full control
Various authentication features give you full control over who has access to your documents and devices. This way you can protect your business critical data and make sure that what is yours, stays yours.

To streamline the user login process, all Toshiba e-BRIDGE Next systems support the use of card readers. All it takes to authenticate a user is a swipe of an ID card for immediate access to individual functions and documents. Alternatively, you can set up passwords or pin numbers for each user.

Safe as safe can be
All e-BRIDGE Next models fulfil the highest security standards to protect your data from unwanted access. So whether you are looking for document security, device security or access security - our new systems have it all.

All e-BRIDGE Next models are configured with the Toshiba Secure HDD without compromising on the efficiency and performance of the systems:

> The Toshiba Secure HDD, which is built in as standard, works with a 256-bit AES encryption in real-time and stores the encryption key on the HDD itself. Furthermore, the HDD knows which device it has been built into and will only share information stored with this device after an authentication process. If the HDD is removed and connected to another MFP or PC, the encryption key will be deleted automatically — guaranteeing that your data is safe.

DOCUMENT SECURITY
Secure PDF
Hard Copy Security[1]
Private Print

DEVICE SECURITY
SSL
